## EDUCATION

### 12th(High School)

Patrachar Vidyalaya(CBSE) - Delhi

05/2019

70%

Courses

- **Science(PCM)**

### Bachelors in Computer Science

University of Newcastle - Australia

Courses

- **Software Development**

## PERSONAL PROJECTS

### Fiverr-Clone

- A freelance job marketplace web application. Provides features including creating a user account or a seller account, supports user authentication, creating and managing gigs, adding reviews, creating gig order, chatting with customers etc.
- Frontend - **React, Javascript, SASS**
- Backend - **Node.js, Express, MongoDB**
- Services - **Cloudinary** for image uploading and storing, **TranstackQuery** for fetching and modifying data across the application, **JWT** for authorization and authentication, **Stripe** is used as a payment gateway to process order payment.

### Yelp-Camp

- **YelpCamp** is a Yelp style website for campgrounds, where people can share campsites with photos and leave a review on other campgrounds. This app supports *user authentication, posts management* (creating, editing, and deleting), *image uploading, displaying map* etc.
- Languages - **Javascript, EJS, CSS**.
- Tools - **Node.js, Express.js, Bootstrap v5.0, MongoDB**, NPM tools: - **Mongoose, Passport.js**: handle authentication, **Joi**: schema description & data validation, **helmet**: helps secure the app by setting various HTTP headers, **express-mongo-sanitize**: prevent MongoDB Operator Injection.
- Services - **[Cloudinary]**: store the images that users upload, **[MongoDB Atlas]**: store the data of campground, reviews and users, **[Mapbox]**: provide interactive maps to mark the locations of campgrounds.

### AI-Summarizer

- The application provides functionality to summarize an article using the *rapid API's openAI tool*. The user has to enter the link of the article that needs to be summarized and with the click of a single button and the desired result is achieved.
- Setup a **ReactJS** project using **Vite**, create a responsive, beautiful UI/UX with a nice touch of glass morphism using **Tailwind CSS**, make advanced **RTK query API** requests that fire on condition, save history using the local storage, handle form events and catch errors, implement copy to clipboard.
